

TradingView Strategy Risk Lab

Model-training report for a TradingView trade export. The report reviews fragile setups with holdout metrics, SHAP drivers, and a zero-lookahead feature boundary.

TRADES

240

validated rows

BAD-TRADE RATE

0.4833

label prevalence

ROC-AUC

0.5873

holdout score

Top Risk Drivers

Feature	Importance
trend_score	0.38024
atr_pct	0.34524
volume_z	0.23011
side_code	0.04441

Evidence Contract

Feature timing

Only setup fields known before exit are model inputs.

Label boundary

Realized PnL is used only to define the target.

Explainability

SHAP shows drivers; DiCE stays on actionable fields.

Usage

This is strategy review, not live execution.

Counterfactual next step: Start the counterfactual review with trend_score. Compare the bad-trade rate before and after tightening that condition before using it as a live filter.
